

**QUANTUM ATOM OPTICS
INTERNATIONAL STUDENT SUMMER SCHOOL
KILOLA, AUSTRALIA
<http://kioloa.anu.edu.au>**

November 28 - December 1, 2007

www.acqao.org

Kioloa 2007 is an international student workshop in quantum and atom optics to bring together PhD students, senior researchers and some honours students for an opportunity to discuss basic techniques, latest results and a vision for the future of our research field.

The workshop will be held at the Kioloa Campus of the ANU which is located at the South Coast of New South Wales with free access to the beach, forest and a relaxing rural environment.

The program will include tutorials leading to long summary lectures by leading researchers in our field. It will include research talks reporting latest results presented by PhD students from Europe and Australia/New Zealand and poster presentations for all attending students.

This workshop will be held during the week before the international OSA *Conference on Quantum Optics Downunder* (QAO 07). All currently registered PhD students attending Kioloa will also attend QAO 07 and present their posters there. Researchers from ACQAO, IFRAF and the SFB can attend Kioloa if they wish, but they will present their work only at QAO 07.

Cost for non-ACQAO participants is \$AUD350 – covers the workshop, accommodation, meals and transport from Canberra to Kioloa then onto Wollongong if required.
